

Example article using *WRITE – with git*

Penelope Maher, Stephen Maher

Abstract

Small example using *WRITE – with git* to write a journal article.

1 Introduction

Writing a journal article in L^AT_EX has so many advantages over writing in an office product such as ~~word or libre office~~MS Word or libreoffice. But there are a few things L^AT_EX is missing. These include personalised track changes, personalised to-do notes and ~~merging the ability to easily merge~~ documents. So we wrote *WRITE – with git* to improve the writing experience in L^AT_EX.

The software that we have writted is a collection of shell scripts that utilise the diff managing ability of git. It simply compares all revisions of a document and produces a diff file that can be edited.

to do note.

2 Conclusions

Using the package *WRITE – with git* you are able to create personalised ‘to do’ notes ~~that are dated and with have~~ a different colour for each author. After running the included scripts, a personalised diff file is created that conveniently displays all changes that have been made.
